Monmouth Beach, N.J.

Dear Sir:

This will verify as correct your report of reception of HJED, La Voz del Río Cauca.

HJED operates on the frequency of 820 kilocycles with a power output of 50,000 watts. A Westinghouse transmitter is used to feed a two-tower directional antenna system. Major signal lobes are beamed North and South.

The HJED transmitter site is located near Buga, some 60 kilometers North of the station's studios and offices in downtown Cali.

HJED is one of three 50,000 watt stations in the CARACOL network and is one of Latin America's most progressive stations.

Thank you for your report. We hope that you will continue to listen to Uma Voz en el Camino, a nightly presentation of Colmotores on HJED.

Sincerely yours,

David Gleason
